

BALLYCLARE

2026

TRUST. PROTECTION. INNOVATION.
**THE WORLD OF BALLYCLARE
WORKWEAR**

THE WORLD OF **BALLYCLARE**

Worldwide there are billions of hard-working people. There are specific workers we love, men and women who can adapt to any situation, especially when it really matters. They have nerves of steel, heart and courage. For this type of person there is no sea too rough.

It is our mission to prepare these trailblazers for their jobs; to protect them so they return safely to their loved ones. With our heads and hearts we make protective clothing for these everyday heroes. Together, we are ready for every challenge, to push every boundary. We innovate at every opportunity to perform to the highest levels.

We enjoy the future.

BALLYCLARE INTERNATIONAL

**MAKING PROTECTIVE
CLOTHING TO PROTECT
WORKERS AROUND
THE WORLD.**

Ballyclare has been keeping workers and firefighters safe and comfortable for well over a 100 years – building a reputation as one of Europe’s leading workwear and protective clothing suppliers.

“We are a designer, manufacturer and distributor of high quality protective clothing, functional workwear and highly technical fire suits.”

We combine the most traditional of manufacturing attributes, the most innovative thinking, the very latest and best quality fabrics and cutting-edge production techniques to create ranges that provide outstanding protection and the ultimate in shift-long comfort.

We are a trusted producer of structural and specialist firefighting kit and proudly hold the Royal Warrant for the supply of Specialist Fire Protective Clothing By Appointment to Her Majesty The Queen.

As well as supplying protective clothing for the emergency services and armed forces, we supply fully managed services encompassing garment supply, leasing, repair and laundering. We have offices, distribution centres and our own manufacturing facility across the UK, Europe and north Africa.

Our mission statement - trust, protection and innovation – is at the heart of everything we do.

EVERYDAY WEAR. EVERYDAY STYLE.
THE 365 COLLECTION

The journey is limitless – the 365 collection is designed for workers who can adapt to any situation.

No matter the conditions – hard or rough work, rain or shine, summer or winter – the 365 collection is everyday wear, everyday style.

It's all about trust, your equipment, your colleagues, your clothing. Made for every movement – a collection of flexibility, style, comfort and technical functionality that performs time and time again.

Take action, make the difference and look your best.

Everyday – 24/7, 365 days a year.

SAFETY ICONS AND WHAT THEY MEAN

European Regulation 2016/425

This Regulation defines the obligations of producers of protective clothing. They must demonstrate that the clothing complies with the health and safety requirements set out in the Regulation.

The most common way is through certification of the clothing in accordance with European harmonised standards for protective clothing known as EN standards by a so-called notified body: an independent body designated for this purpose.

In addition, producers must provide user instructions explaining the levels of protection provided by the item of PPE and guidelines on use, cleaning and maintenance.

Harmonized standards are, after the setting of standards, assessed by a CEN consultant whether the standard contains all the components and is sufficient to demonstrate a presumption of conformity with the European Regulation. All other standards are valid for use and can be used as guidance.

Personal protective equipment is divided into 3 categories:

Category 1

Low-risk. Products in this category are designed to offer protection against the following risks:

- Superficial mechanical injury.
- Contact with cleaning materials of weak action or prolonged contact with water.
- Contact with hot surfaces not exceeding 50°C
- Damage to the eyes due to exposure to sunlight (other than during observation of the sun)
- Atmospheric conditions that are not of an extreme nature.

Category 2

Medium-risk PPE. Category 2 includes products designed to protect against risks other than those listed in categories 1 and 3.

Category 3

High-risk. Products in this category are designed to protect against risks that may cause death or irreversible damage to health relating to the following:

- Substances or mixtures which are hazardous to health
- Atmospheres with oxygen deficiency
- Harmful biological agents
- Ionising radiation
- High temperature environments, the effects of which are comparable to those of an air temperature of at least 100°C
- Low temperature environments, the effects of which are comparable to this of an air temperature of -50°C
- Falling from height

- Electric shock and live working
- Drowning
- Cuts by hand-held chainsaws
- High pressure jets
- Bullet wounds or knife stabs
- Harmful noise

Requirements of a standard

In general, standards are made up of 3 different parts.

1. Fabric/component requirements (e.g. flame/heat resistance, antistatic, physical strength, shrinkage)
2. Requirements for design / design of the clothing (e.g. sizes, pockets, closures and overlap between trousers and jacket)
3. User information requirements (e.g. garment/care information).

Depending on the requirement of the standard, tests will be conducted either in new state or after pre-treatment by washing as per the manufacturers care instructions.

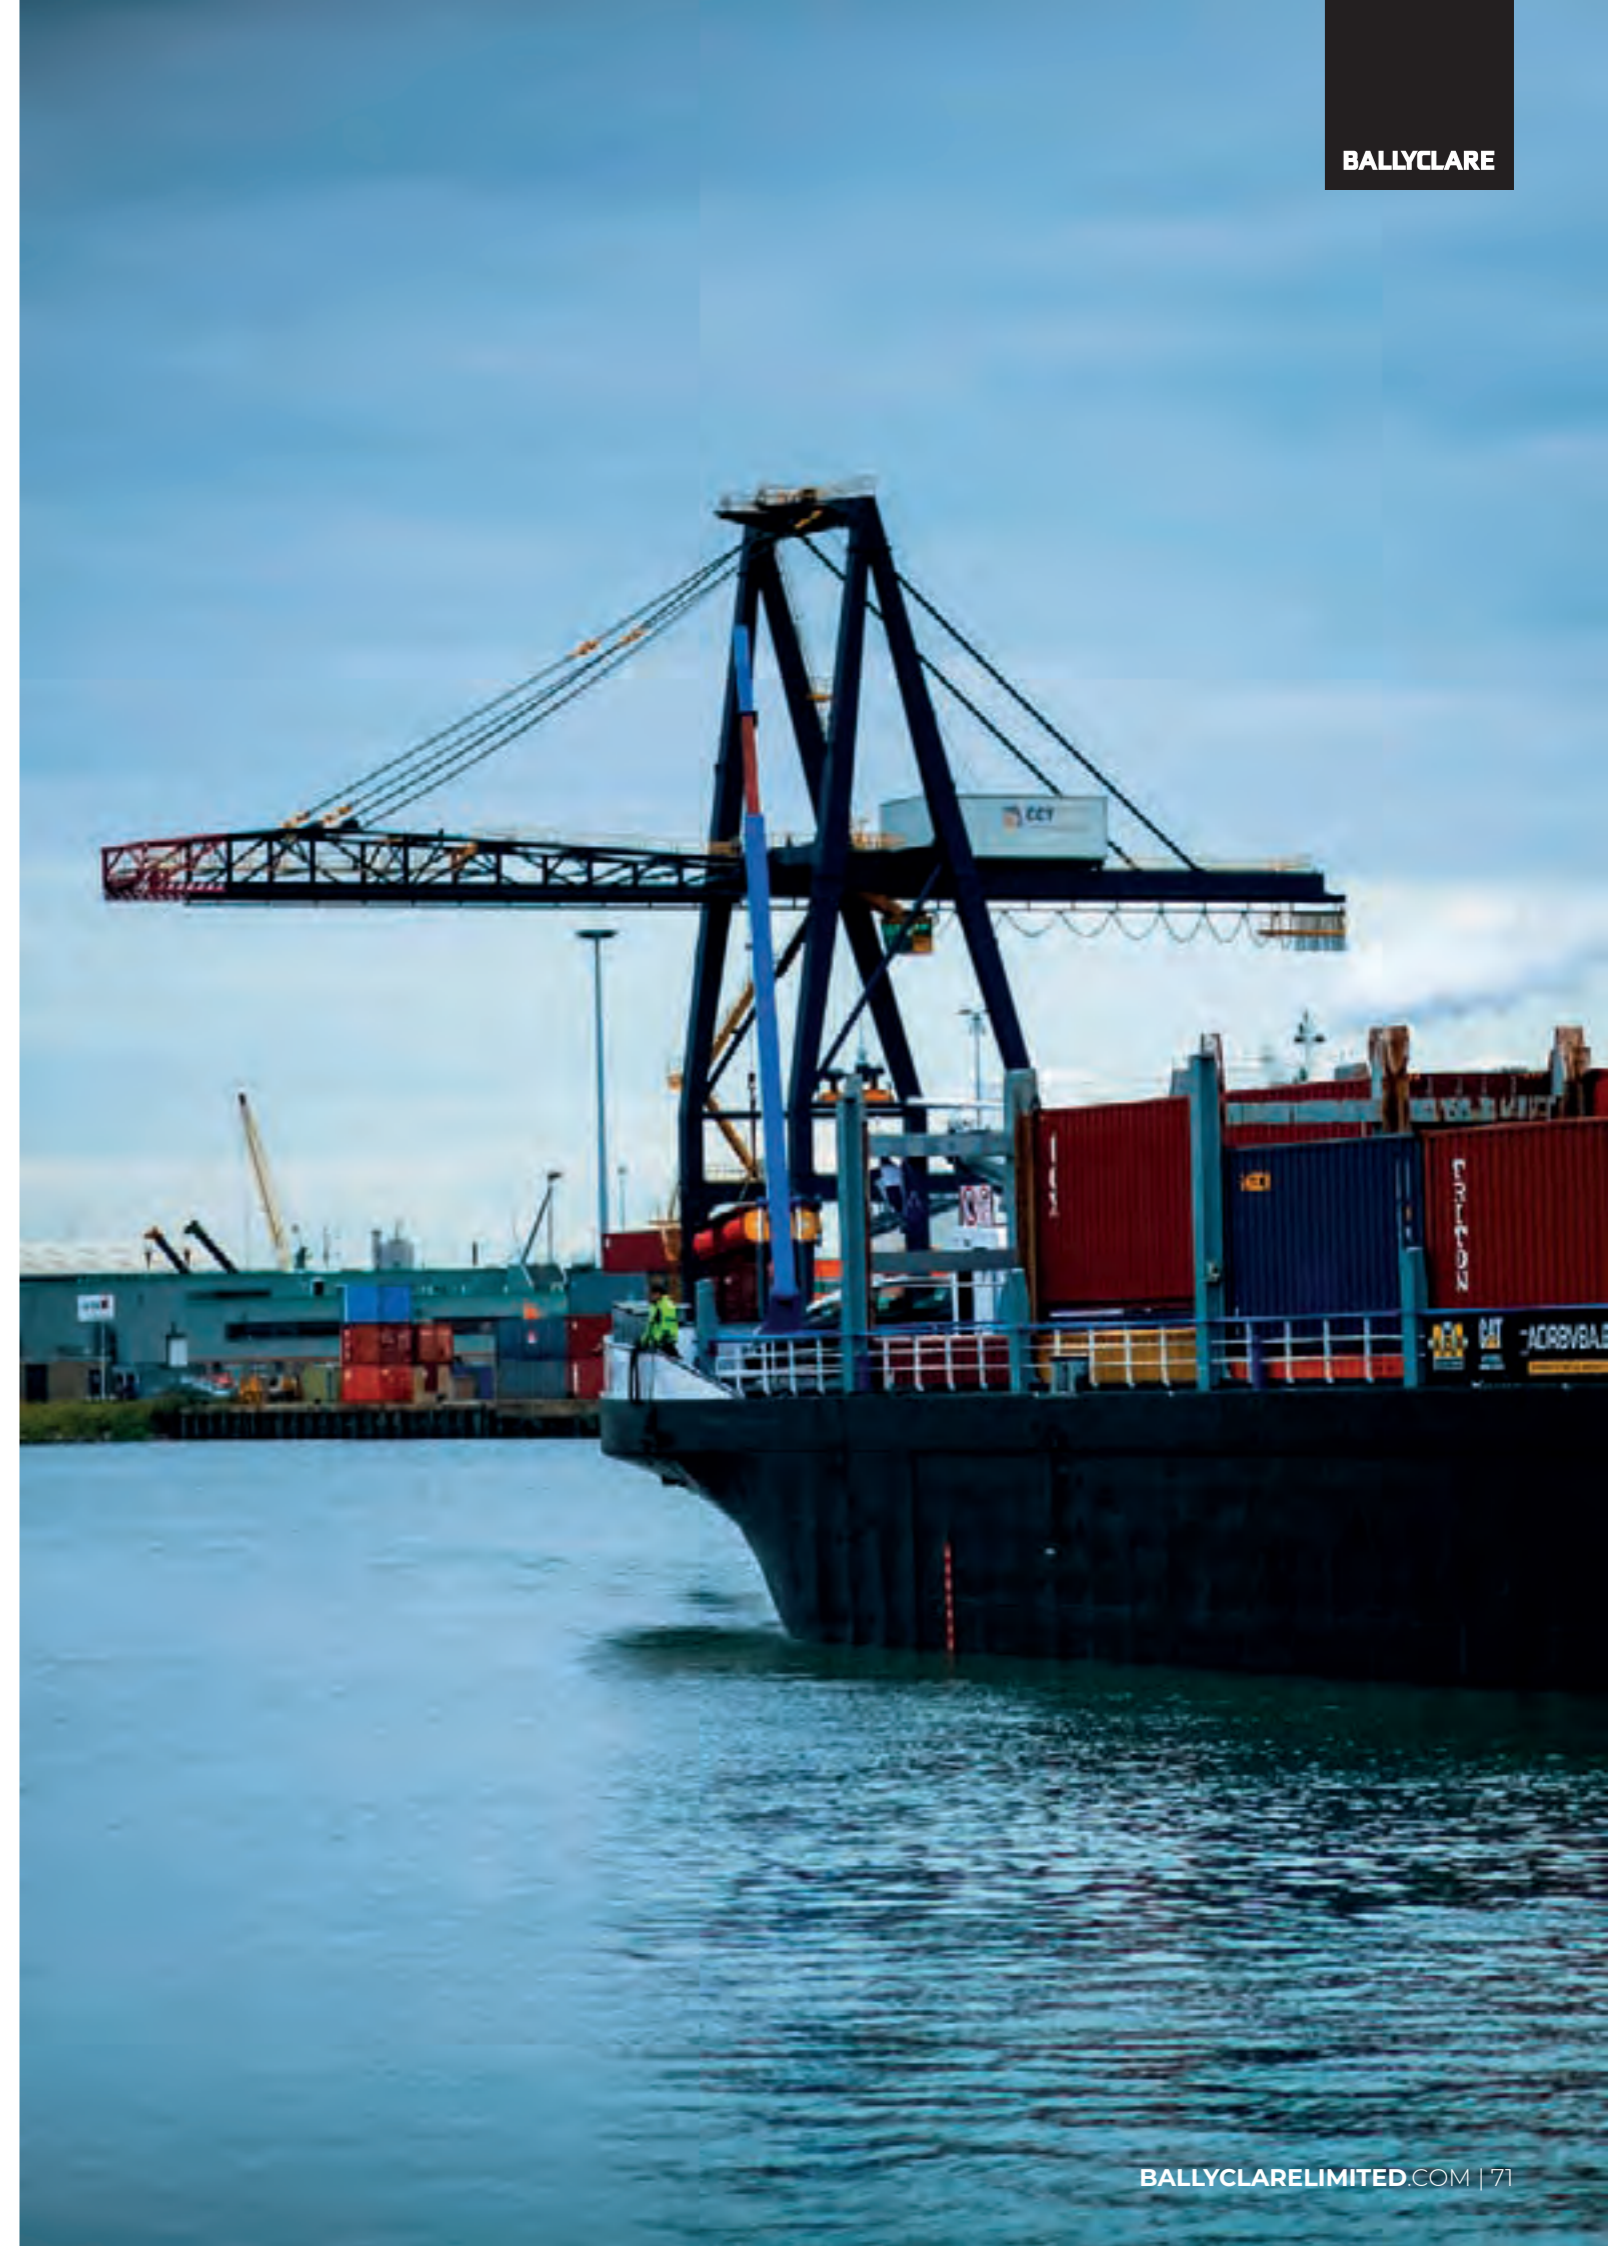

Garments can be pre-treated under laboratory conditions using any of the following methods:

- EN ISO 6330 – Domestic laundry
- EN ISO 15797 – Industrial laundry
- EN 3175-2 – Dry cleaning

The minimum number of wash and dry cycles prescribed in a standard is usually 5.

BALLYCLARE Workwear

All Ballyclare protective clothing complies to the relevant standards in order to be compliant to the EU Regulation 2016/425. Ballyclare is actively participating in the standardisation process both nationally and internationally so is perfectly placed to ensure that its products are up to date with the latest standards. If you have any questions about standards and their applications, please contact our standards experts.

EN ISO 14116

EN ISO 14116
Protection against flame – Limited flame spread.

EN ISO 14116 specifies the properties for limited flame spread of materials and protective clothing, clothing that can make brief contact with small flames. In addition to limited flame spread performance, the standard also sets requirements for mechanical strength, design and provision of information (user manual). The standard is only intended for protection against flames, not against other forms of heat.

EN ISO 11612

EN ISO 11612
Protective clothing to protect against heat and flame.

EN ISO 11612 specifies the requirements for heat and flame-resistant clothing that covers the entire body, excluding hands, feet, neck and head. In addition to limited flame spread (A1/A2) the clothing must also provide protection against one other source of heat. The levels or protection offered by an EN 11612 compliant garment are expressed in code letters and numbers listed after the standard on the garment CE label and user information sheet.

Flame spread

- A1: Surface ignition
- A2: Edge ignition

Convective heat

- B: 3 classes (B1, B2, B3), where 3 indicates the highest class and highest protection level.

Radiant heat

- C: 4 classes (C1, C2, C3, C4), where 4 indicates the highest class and highest protection level.

Molten aluminium

- D: 3 classes (D1, D2, D3), where 3 indicates the highest class and highest protection level.

Molten iron

- E: 3 classes (E1, E2, E3), where 3 indicates the highest class and highest protection level.

Contact heat

- F: 3 classes (F1, F2, F3), where 3 indicates the highest class and highest protection level.

In addition to requirements for flame-resistance and heat protection, the standard also sets the requirements to mechanical strength, design and provision of information (user manual).

EN ISO 11611

EN ISO 11611
Protective clothing for use in welding and allied processes.

EN ISO 11611 specifies the requirements for welding clothing, including, welding hoods, aprons, sleeves and gaiters. The requirements are also for clothing worn during welding associated processes with similar risks.

The clothing is intended to protect against small splashes of molten metal, short contact with flame, radiant heat and minimizes the possibility of electric shock due to short contact with electrical conductors (max voltage 100V DC). Perspiration and pollution can affect electrical conductivity.

The welding standard has 2 classes:

- Class 1 for regular welding
- Class 2 for heavy duty welding

The primary difference between the classes is the amount of weld splatter, the degree of radiant heat and also tear strength. Class 2 will only be awarded if all requirements have been met.

Flame spread

- A1: Surface ignition
- A2: Edge ignition

Radiant heat

- Class 1: RHTI24 > 7 seconds
- Class 2: RHTI24 > 16 seconds

Impact of small metal splashes

- Class 1: > 15 splashes
- Class 2: > 25 splashes

Electrical resistance

- Rv > 105 Ω.

Tear strength

- Class 1: > 15N
- Class 2: > 20N

In addition to requirements for protection against flame, heat and electrical resistance it also sets a requirement for mechanical strength, design and provision of information (user manual).

EN ISO 61482-1-2

EN ISO 61482-1-2
Protective clothing with protection against the thermal hazards of an electric arc (Box-test method).

EN-IEC 61482-1-2 specifies the box test method and requirements for flame and heat-resistant protective workwear where there is also the risk of an electric arc. Hereby the thermal protection is assessed. Other effects such as light, sound, pressure, hot oil and metals and electric shock, are not covered by this standard. The standard does not apply to arc welding.

On the basis of applied current the standard recognizes 2 classes:

- Class 1: 4 kA
- Class 2: 7 kA

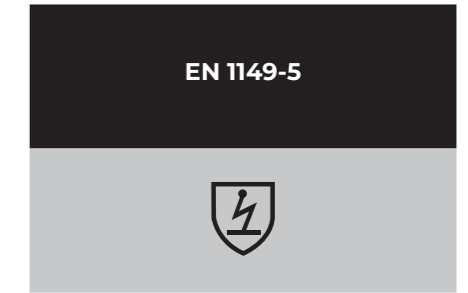

In addition to assessing the heat build-up, the standard also sets requirements for flame protection, mechanical strength, design and provision of information (user manual).

EN IEC 61482-1-1

EN IEC 61482-1-1
Protective clothing with protection against the thermal hazards of an electric arc (Open Arc method).

EN-IEC 61482-1-1 specifies the open arc test method and requirements for flame and heat-resistant protective workwear where there is also the risk of an electric arc. Hereby the thermal protection is assessed. This standard is a derivative of ASTM 1959F applied in the US and determinates the so-called Arc Protective Performance Value (ATPV), expressed in cal/cm². The ATPV value is the value where the wearer has a 50% chance of getting second-degree burns. The Arc energy is always scaled up to 50% of the measured values either below or above are the Stoll curve values. Included in the newest version of this standard is a more conservative type of arc rating for materials called the Incident Energy Limit Value (ELIM) this is also reported in cal/cm². The ELIM rating is the value where the wearer is protected 100% of the time.

EN 1149-5

EN 1149-5
Protective clothing with electrostatic properties.

EN 1149-5 specifies the properties for protective wear used in explosive atmospheres. The clothing is part of an earthed system to avoid ignition sparks. The requirements may be insufficient in oxygen-rich flammable environments. The standard does not apply to mains voltage.

The standard uses 2 material tests. At least one of the methods mentioned below must be obtained.

EN 1149-1: surface resistance

- Surface resistivity ≤ 2.5 x 10⁹ Ω

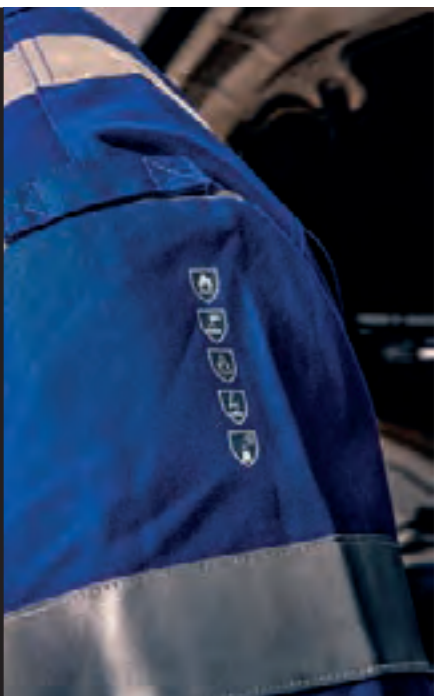

EN 1149-3: charge decay

- Shielding factor > 0.2 and/or
- Half-life < 4 s

In addition to antistatic properties of materials the standard also has design and information requirements (user manual).

Where an IEC 61482-2 garment is certified to the 2009 edition of the standard, the double triangle pictogram will be displayed on the garment CE label and user information document. When an IEC 61482-2 garment is certified to the 2020 edition of the standard, the arc flash pictogram will be displayed on the garment CE label and user information document. Ballyclare has included the arc flash pictogram on the compliancy prints of our multinorm range to show that the fabric has been tested to the requirements of EN 61482-1-1:2019 specifically for the ELIM rating. This can be found listed below the Cal rating within each garment.

EN 13034

EN 13034
Protective clothing for limited protection against liquid chemicals.

EN 13034 specifies the requirements for limited protection against small splashes or light mist of chemical fluids. The standard has the following tests and requirements:

Wear resistance according to Martindale abrasion.

- Minimum class 1: 10 revs

Tear strength (trapezium test sample)

- Minimum class 1: 10 N

Tensile strength

- Minimum class 1: 30 N

Puncture resistance

- Minimum class 1: 5 N

Liquid repulsion

1. H2SO4 30% (sulphuric acid)
 2. NaOH 10% (caustic soda)
 3. o-Xylene
 4. Butan-1-ol
- At least 1 liquid class 3: > 95%

Resistance to fluid penetration

1. H2SO4 30% (sulphuric acid)
 2. NaOH 10% (caustic soda)
 3. o-Xylene
 4. Butan-1-ol
- At least 1 liquid class 2: < 5%

Seam strength

Minimum class 1: > 30 N

Clothing test

- Type PB 6 clothing: offers partial protection
- Type 6 clothing: protection to the whole body (=with the exception of head, hands and feet).
- spray/mist test: no penetration by the clothing.

In addition to material and garment properties the standard has information requirements (user manual).

EN ISO 20471

EN ISO 20471
High visibility clothing.

EN ISO 20471 specifies the requirements for high visibility clothing to the visual presence of the passive road user in both day light and low light situations. The standard is split into 3 classes.

- Class 1: traffic speed is ≤ 30 km/hour
- Class 2: traffic speed is ≤ 60 km/h and > 30 km/h
- Class 3: traffic speed is > 60 km/hour

The classification is made on the basis of the proportion of fluorescent material (HV color) and proportion retroreflecting material. Requirements are set for the colour quality, brightness and reflection in new condition, but also after washing and exposure to xenon light.

In addition to material properties, the standard specifies the fluorescent positioning requirements and retroreflective material as well as to the mechanical properties and provision of information (user manual).

EN 343

EN 343
Protective clothing for protection against rain.

EN 343 specifies the requirements for the clothing with protection against precipitation (rain, snow, but also fog and humidity off the ground). The standard imposes requirements on material and seams.

Water penetration

- X: 4 classes where 4 is the highest class and indicates the highest level of protection.

Water vapour permeability

- Y: 4 classes where 4 is the highest class and indicates the highest level of protection.

In addition to requirements for water penetration and water vapour permeability set within the standard there are also requirements for mechanical strength and provision of information (user manual).

SUSTAINABLE COMMITMENT

Ballyclare is aware of the need to make products and work processes more sustainable. It should not be a marketing tool nor sales argument only. It's just making a contribution to the total process. What can be done has to be done, and that is what we do.

Always in a commercially viable way as the challenge is to get it sold in order to create volume for the sustainable ranges of the material partners.

In this catalogue we show the step forward we made already in using sustainable content in the collection for equal pricing as the original standard materials. We also show what is to be expected soon.

Various items in this catalog feature our ECO For Future Logo. The products with this logo have now quietly undergone over the last year an adjustment from standard to recycled content or are now provided with organic cotton.

In addition, we are in the process of converting the cotton/polyester items into recycled Pet-Polyester/cotton - these articles are marked with / 510 *.

For the Multi Norm products we offer now a sustainable option with a recycled polyester/lyocell combination based on MTO production.

For the r-Pes marked items in this catalogue we have used REPPEVE fibers.

Ballyclare has created its own ECO logo to mark items with sustainable content. This can be a percentage of recycled r-PEt polyester, Lyocell, organic cotton etc. In the fundament we use upgrades which stay commercial in line with the market. For MTO production there are many more options.

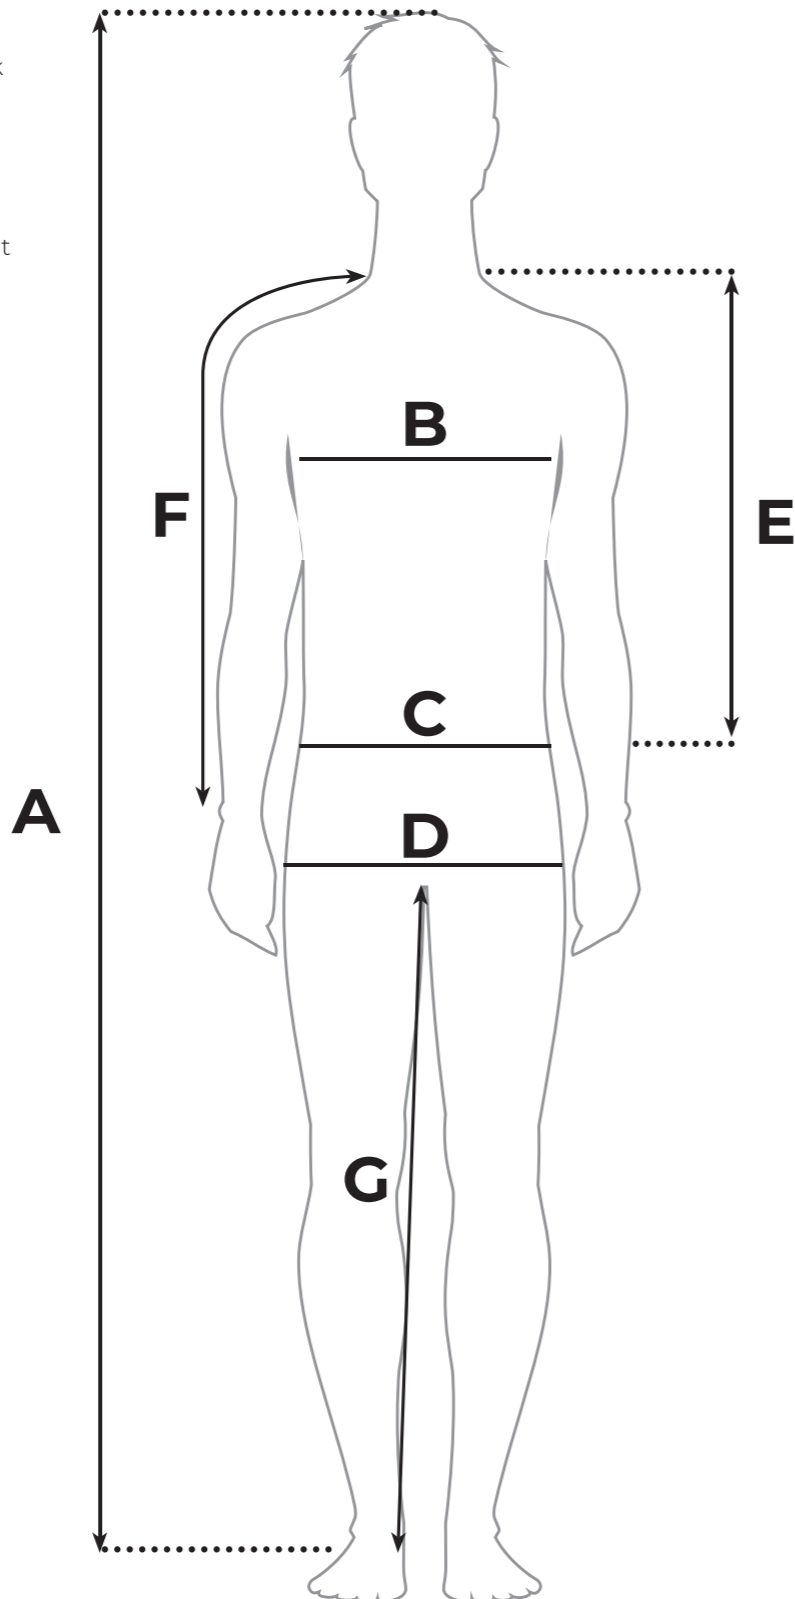

SIZE GUIDE

All our products are shown with size information. Our clothing is not available in every size and custom-made product availability may differ with each garment. The instructions below show you how to measure for the correct size. Taking your measurements will ensure optimal protection and a comfortable fit.

How to measure your size?

- If all your workwear fits well, after washes, check the tag and here you will find the size and product.
- Alternatively, you can follow the instructions illustrated on the right. Ask someone else to take the measurements if you cannot manage it yourself.

It is important you wear the clothes you would usually wear underneath your workwear when you take your measurements. Take the measurements of the widest part of the body.

- A** Length
- B** Chest, measure the widest part
- C** Waist, measure the natural waistline
- D** Hip, measure the widest part
- E** Back to waist, measure down the centre of the back, from the neck to the natural waistline
- F** Arms, measure from the side of the neck to the wrist, to include the shoulder
- G** Inside leg, measure from crotch to the heel

COLOUR CARD

BALLYCLARE made to measure products.

Specials and customised products

BALLYCLARE has the standard stock collection and also gives you the option to order products in the colours and fabric quality you'd like. This is possible if the order consists of a minimum of 50 pieces per style, with a minimum of four pieces per size.

In our catalogue you will find our standard colours and some products also show colour blocks. The colour blocks show what the optional colours available are for that product. It is possible to order all our products listed

in the catalogue in the colours and qualities stated in the table below.

Projects

BALLYCLARE is specialised in finding project-based solutions that require more than a simple adjustment in colour or quality. If you are looking for a specific solution, do not hesitate and contact our Customer Service teams. Please find the contact information of each country on page 2 of this catalogue.

WASHING ADVICE

Keep clean to satisfy the safety standard and to increase the product's service life.

SYMBOLS KEY

Every garment has a label which tells you what the fabric is made from and includes symbols that let you know how to care for your garments. The following definitions apply:

 Handwash	 Tumble drying normal temp	 Iron at maximum 110°C	 Do not dry clean
 Maximum washing temp. 40°C	 Drying flat/drip dry	 Iron at maximum 150°C	 Dry cleaning
 Maximum washing temp. 60°C	 Do not tumble dry	 Iron at maximum 200°C	
 Maximum washing temp. 70°C	 No Bleach	 Do not iron	

KEEP CLEAN

Your workwear and PPE garments must always be clean to be safe. Frequent washing, maintaining and storing work clothes in the right way is important to guarantee both the durability and the functionality of the workwear. Every garment therefore has a label with clear washing guidelines, that are always designed to care for the most delicate part of the garment. Garments covered in dirt will significantly decrease visibility and other properties, this may put you in danger.

The flame and heat protection in protective clothing made of fabrics with inherent flame-resistant properties cannot be washed or worn out. Regular washing ensures that the garments do not contain any flammable particles or dirt that may compromise the protective properties.

- Follow the washing instructions on the garment care label, be particularly carefully when washing rainwear.
- When washing garments especially with reflective details always wash the garments inside out to avoid damage to the reflective properties.
- Make sure to close all zippers, velcro and buttons before washing.
- Wash dark colours separately.
- To reduce the number of cycles fill the washing machine.

TEMPERATURE

We always label our garments with the highest temperature allowed. But you can select a lower washing temperature to save energy and help the environment. Washing at 40 degrees instead of 60 degrees saves almost 50 per cent energy.

DETERGENTS

- Use eco friendly detergent that is kind to the environment and your skin to prevent skin irritation.
- Do not use softener, as it may reduce the performance of the fabric.
- Avoid softener and soap-based detergents when washing PPE garments as chemicals from the soap could counteract the properties of the fabric.

DRYING

- Where possible, dry outside in the air. However, read the label carefully. Certain garments must be tumble dried at a high temperature to retain the fabrics properties.
- To avoid shrinkage and protect the fabrics avoid using a dryer on a higher temperature than necessary.

CARING FOR YOUR GARMENT

- You should never mix certified garments with non-certified garments in the same wash.
- Failure to launder properly could adversely affect the properties of the fabric.
- You must carefully examine your garment on a regular basis, to make sure that the fabric is undamaged and keeps you safe.

CORPORATE SOCIAL RESPONSIBILITY

Corporate Social Responsibility (CSR) provides BALLYCLARE with a vehicle for integrating sustainability into its operational processes. Managing the value chain involves numerous sustainability aspects to a greater or lesser degree.

As client, manufacturer, supplier and partner within various value chains, BALLYCLARE is constantly working at creating sustainable innovations in many different areas. CSR involves striving towards a balance between People (social and ethical aspects), Planet (ecological and environmental aspects) and Profit (economic and operational aspects).

BALLYCLARE aims at transparent and ethical business operations. This goal is structurally embedded in the various facets of the organization and its operations. The division has further defined, drafted and organized BALLYCLARE CSR policies in accordance with the structure, content and principles of the CSR Performance Policy.

The company operates to the highest standards and is accredited to the quality standard BS EN ISO 9001:2015 and the environmental management standard BS EN ISO 14001:2015.

Ballyclare is a verified member of RISQS (Railway Industry Supplier Qualification Scheme), BSIF (British Safety Industry Federation) and is a BSIF Registered Safety Supplier.

“Under the Regulation (EU) 2016/425 on personal protective equipment (PPE), Module D is an externally-audited accreditation and ‘System for ensuring quality of production by means of monitoring’ and relates to the consistent and compliant manufacture of complex (“life saving”) PPE.

This means you can be confident Ballyclare Module D garments have been manufactured with an approved quality-control system that not only requires auditing of the system documentation, technical files and production site, but also of other premises involved in the process such as head offices and design offices.”

In this catalogue the colours will be printed as accurately as possible. No rights can be derived if there are slight colour differences present. BALLYCLARE is not responsible for misprints and typographical errors in this catalogue.
